

Videosys Fencing Camera

We have the knowledge and experience to design and build cameras and wireless systems into whatever the customer requires.

Client request: A wireless camera system that incorporates camera, COFDM transmitter and battery, to offer HD pictures from a fencing helmet, the transmitter must stay in its current housing so it can be redeployed quickly onto other cameras.

Using the Videosys camera and the Cobham Nano transmitter secured underneath, this enabled the customer to easily unclip the transmitter and use for other applications instantly.

Please contact us with your requirements

Specifications

HD COFDM transmission using Cobham Nano with 100mw output.
Full HD camera system with telemetry colour control*

*Released Q3 2015
